PART 4. WRITING

(46)

I've lost my mobile phone. It's very important for me, because I have to call my mom every day. I think, I left it in the canteen. Today, I am very sad. I'm going to school now. I want to get my phone and go to the home. I have to text my grandpa, I will go to his birthday and I will meet with him and my grandma. And I have to message to my dad, I can't go to him on Friday, because I will go to school and I have to do my homework. I have to say my classmate, I don't want to walk, because my teacher'll text me my homework on the phone. So, my phone really important for me and my family. I have to get it.

for Masha

Hello,
I'm sorry but I lost my phone. I think that I left it in canteen.
It's black with blue screen. It is "Poco x3". I hope you will find
it, because it is very important for me. I haven't got another, so
my mom will be very angry. If you find it write me please. My
e-mail address is "diffie@gandex.com".
Thank you.
Goodbye

To begin with, I can say that artificial intelligence is very innovative technology. It helps people a lot to solve some of their problems or to help to deal with some businesses.

Purpose of the survey is to get students opinions on AI in Education. The total plural of asked students is thirty.

Most of students which is sixty percent supports AI in Edu education. Twenty five percent of asked students has got ~~skeptical~~ ~~or once~~ concerned opinion. And the rest of students which is fifteen percent unsure or don't know whether they support AI in Education or not.

Analysing the survey, I can say that most of asked students ~~are~~ support AI in education because it helps them a lot to do their homeworks or to make a project.

Personally, I don't support AI in education because of its unidealness. AI can make mistakes that can affect on their studying process in bad way.

In conclusion, I can say that ~~AI doesn't help~~ I think that AI doesn't help in education. Personally, I think that it doesn't help in education properly because of its issues. In my opinion AI can sometimes make mistakes that can affect on the studying process bad. So to my mind, if students want AI to help them in education, they should use only well-trained AI models such as: "Chat GPT" or "Deepseek".

In recent years, ~~the term "Artificial Intelligence", or AI~~ has become a regular feature in global conversations - from news headlines and tech conferences to everyday chats in classrooms and workplaces. Education is also being reshaped by AI. A few days ago, I have conducted a survey among my classmates about the use of artificial intelligence in education. 15% of my classmates don't sure about AI in Education, 25% have skeptical opinions and 60% support AI in Education. In total, almost everybody have a possitive attitude to AI in Education. In my view, it's obviously because AI helps a lot in study. Intelligent tutoring systems adopt learning materials to suit individual student needs, providing personalized feedback and adjusting the difficulty of content. Language learning apps use speech recognition and adaptive tests to help users improve their skills. ~~But I must admit someone don't like AI.~~ But someone in my class don't support AI in Education. I think they are afraid of data privacy. AI systems often rely on huge amounts of personal data to learn and function. ^{You don't know who owns your data.} AI can also be biased if trained on unfair or unrepresentative data. As for me, I have a very possitive attitude to AI in Education. As I said, AI really helps in study. ~~I use it everyday.~~ When I learn English I use language learning apps to make my speech fluently and improve my "listening". and AI helps me. In my view we can make our life with AI better. We must control using of AI and learn how use AI right. Looking to the future, I thike AI will changed our life for the better.

I think that the main idea of the survey is to understand how students ~~thing~~ think about the Artificial Intelligence in education, and also to know how students feel about that.

As we can see, about 60% support AI in education, but 25% of students are concerned about that. And only 15% of students don't even know it or they're unsure.

I guess that people, who support AI in education, think that they can use it to do their homeworks or projects. Students, who are concerned about it, are worried that Artificial Intelligence can replace teachers at schools, univers^{si}ties ~~and~~ etc. Talking about students who don't know about using AI in education, ~~it's good~~. I suppose that it's good that they don't use it in their studies, but anyway, AI has benefits.

In my opinion, Artificial Intelligence it's not that ~~bad~~ good in education, but we can't shut it down, we can't imagine our lives without the Internet, ~~and unfortunately~~, AI is a part of it. AI can help us in our studies: do homework, slide-shows/presentations and our projects. It's not bad to use AI in educations, sometimes even teachers use it in their work.

We should think, not just copy ~~answe~~ answers from the Internet or AI; they can replace us and our minds.

The most of students said that they support AI in education and it's not bad, everyone has their own choices and can make their own decisions. 25% of students are skeptical about using AI in their studies. And only 15% are unsure about it.

Your choice depends on your personality and your preferences

In this report i'm going to tell about ~~the~~ use of artificial intelligence. The main reason of survey is understanding of students opinions about artificial intelligence in education.

On the picture we can see that sixty percent of students support ~~a~~ using artificial intelligence in education. It's easy to understand why more than a half people want to use artificial intelligence in a lot of important parts of life, I think, it's because how popular, simple and good artificial intelligence nowadays. Artificial intelligence is used everywhere: voice assistants like Google and Siri, predictive text, facial recognition and a lot of other services. There are also a lot of people who are unsure or sceptical to support an artificial intelligence in education. It's easy to understand too, forty percent of people ~~can~~ make their decision based on their thinking about the quality of education, with help of artificial intelligence. What am talking about is that the artificial intelligence is too helpful to study like we are studying nowadays. Studying with machine who can solve any question in almost no time is too easy for student to improve. ~~That's not what a student are right in this~~

My personal opinion on artificial intelligence in education is ~~that~~ that artificial intelligence is very helpful, but it's too easy to use. I think it's not bad to use it if students won't ask ~~them~~ it to solve questions directly. What am talking about is using it only to: repeat something you forgot, understand something new if you weren't on a lesson, have a very small help in homework.

At the end of report i want ~~say~~ to say that artificial intelligence is very helpful tool in education if the right student is using it.

The topic of artificial intelligence used in education is ~~to~~ getting more and more popular all over the world, and many people ~~grow~~ have different opinions about it. That's why I decided to conduct a survey among my classmates to see what they think about using AI at schools or universities.

Thirty students took part in my survey. Most of them, around sixty percent, supported the idea of using AI in education. One fourth of them felt concerned about it, and the rest didn't give a certain answer.

As I expected, the survey showed that most people of my age find the idea of using artificial intelligence in ^{the} educational process welcoming. And it's not really surprising: some neural networks are already extensively used among students to help them with studying. Using AI, ~~a~~ students can find all the necessary information for their projects or ~~even~~ even do the project. ~~even~~. If a mathematics ~~exer~~ exercise seems to be too complicated, AI can explain the solution of the exercise step by step, so similar tasks won't cause any ~~trouble~~ further.

But this opinion ^{isn't} ~~wasn't~~ shared by some students, and I can guess why. Not all ~~of~~ students have good intentions on using AI for studying. They may use ~~AI~~ artificial intelligence for doing their homeworks instead of them or cheat on their exams by using it. This way, the students won't learn anything.

~~As~~ To sum up, I can say that artificial intelligence can become a great helper in the educational process, but students shouldn't rely on it completely and should use their head instead.

I'm currently doing a project about the use of artificial intelligence in education. I've conducted a survey and made a pie chart with the results of a relevant survey conducted among my classmates (students) and I'm going to comment on this data and give my opinion on the subject of my project.

According to the data in the table, 60% of the respondents support AI in education, 25% of those surveyed are skeptical about it. And 15% of students don't know their opinion about it.

It can be seen from the data that the number of the respondents who support AI in education is higher than the number those who is skeptical. It can be suggested that most students actually prefer ~~to~~ using AI to enlarge their vocabulary and knowledge.

As for me, I have very good attitude to AI in Education. In my view, it really helps students to do their best and enlarge their skills. AI can help you to find really useful information and give ^{a piece of} ~~some~~ advice. So, in my opinion, ~~AI~~ every student should try to use AI in education.

In conclusion, I think that AI makes our life much better and students shouldn't be skeptical about it. You'll learn much more if you use AI for special information. People ~~&~~ may not be ~~so~~ skeptical about intelligent system. It's our friend.

The opinion Survey

09-0236 10-12-006

The purpose of this (survey) report is to present and analyze the results of a survey conducted among my classmates regarding their attitudes toward the use of Artificial Intelligence in education. The goal was to understand the general opinion and the main reasons behind it.

60% of respondents supports the active use of AI in learning

25% are against its integration, and 15% are unsure or have no definite opinion on the matter.

The results indicate that most students use AI as a beneficial tool. I believe the reason for the 60% in support is the desire for personalized learning. Furthermore, many probably appreciate AI's ability to automate routine tasks like checking grammar and etc.

The 25% who are opposed likely have concerns about over-reliance on technology. They might feel that AI could hinder the development of independent thinking and problem-solving skills.

The 15% who are unsure probably lack sufficient information or have mixed feelings about the potential benefits and risks.

I personally belong to the majority that supports the use of AI. In my view, AI is not a replacement for teachers, but an assistant, which can be helpful for preparing for exams. The key is to use AI as a tool for learning, not for avoiding.

In conclusion the survey shows that while most students welcome AI in education, some remains cautious or opposed. This highlights the need of the balance approach. I suggest that our school could organize seminars to educate students to use AI in educational process.

I'm doing a projection of Student Opinions on AI in Education. I have found a pie chart with some results of a survey. In this report I'll analyse the data and express my opinion at the subject of the project.

According to that pie chart, 60% of ^{the} students support AI in Education, 25% of the students are skeptical about AI in Education and only 15% of the students don't now how they feel about AI in Education. I think, it's because some of the students think, that AI in Education has more disadvantages, than advantages. For example, some of the students can use AI to find the answer ~~for~~ to the teacher's question and not answer by themselves.

Analysing the topic, I have outlined one problem that students don't now how they feel about AI in Education ~~and~~ or they are skeptical about it. In my opinion, the best way of

~~The~~ solving this problem is to use AI in moderation. As for my point of view, students should not use AI in Education so much. They need to learn thinking ~~for~~ their brains and complete tasks for themselves.

I believe ~~+~~ that AI in Education won't interfere with the development of students. I think that the best way of using AI in

Education is ~~to~~ using AI to conduct lessons.

~~So~~ ^{so} In conclusion, I'd like to say that my attitude to AI in Education is neutral.

The purpose of survey is „Student opinions on AI in Education“. It is ^a very important theme nowadays, because of ~~note~~ Artificial Intelligences in students' lives and educational process.

As we can see the most popular choice of students is „support AI in education“ (60%). There is second popular option with 25% „skeptical/concerned“, followed by „unsure/don't know“ with 15%.

After analysis the data of survey, we can see that students mostly support AI in education, that can be because AI is really helpful in searching some useful information or doing some tasks because of its ability to ~~receive~~ require human intelligence. But some students do not support AI in education or do it skeptical. Maybe they afraid of job automation or think that AI can new their ability to receive knowledge.

My personal opinion is that this question has two sides. The good one is that AI really help with finding useful information and support with preparing for exams. But it is also the bad one, that AI is going to replace teachers and become student to lazy kids. I think people should find a balance between these two sides, because AI is really good thing and helper if you control it and do not overuse it.

In conclusion, I want to say that AI really helpful thing in education nowadays and suggest to control it and to let it support you, but not replace you.

This survey is very important. It is interesting to know what people around you think about artificial intelligence in education. Because Artificial Intelligence become ~~a~~ ~~into~~ an important part of our everyday life. It even uses in vice assistants and for recomend ~~studies~~ shows on streaming platform. So, it is obvious that nowadays AI become a part of study too, that's why it is important to know what student think about it.

The results show us that the most part of my classmates ~~are~~ support AI in Education. This part consits 80% ~~of~~ of the whole class. Only 15% dont know, and 25% are concerned about using AI in Study.

I think that part of my classmates, who support AI in Education, think that AI make stading easy. I think it is ~~not~~ right, because sometimes you can use AI chatbot as a ~~teacher~~ teacher, if you can't ask your real teacher or you too scared to do it. Not only students can use AI, teachers also can. For example, as asistent ~~on lesson~~ for preparing for lessons.

~~Like ask AI for a~~

And about the part of students who against from using AI in study I also can understand. Because a lot of students use AI Chatbots to write the right ansers or write an essey, instead of doing homework themselves.

My opinion is that AI in Education is OK. But AI can't be on a place of real teachers, because only people teachers can make a real influation on students and find students powers and wakknes. So, I think it is important to use AI mindfully and use it only sometimes.

In Conclusion I can say that it is cool to use new technologies is Education, but more ~~his~~ important to use it only for

making Education more usefull, but not to make it easier.
